DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 2, drawn to a method of treatment or reversing a cancerous phenotype via nucleic acid, classified in class 514, subclass 44. If this Group is elected, then the below summarized specie election is also required.
- II. Claim 3, drawn to a method of treating a melanoma via administration of a mda-7 protein, classified in class 514, subclass 2.

SPECIE ELECTION REQUIREMENT REGARDING GROUP I:

This application contains claims directed to the following patentably distinct species of the claimed invention:

Specie A: methods utilizing conditions wherein expression of a melanoma differentiation gene is permitted

Specie B: methods which lack being permissive for melanoma differentiation gene expression.

These species are distinct in that expression requires special conditions such as an open coding region, start and stop codons, gene expression biological functions in a cell which will support said expression etc. whereas a number of treatment methods may utilize a gene without such special conditions such as in antisense therapy.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 2 is generic to the above species.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

The inventions are distinct, each from the other because of the following reasons:

The methods of Group I and II are distinct as being directed to the administration or introduction of different chemical entity types in such treatment methods, Group I

being nucleic acid and Group II being protein. Methods of treatment directed to different chemical entities generally are separately published as being divergent subject matter thus documenting the undue search burden if they are searched together. It is also noted that the methods of Groups I and II require separate considerations as to searching for the references that contain subject matter regarding the issues of cell permeability for each distinct chemical type as well as how long each chemical type survives for producing an effect versus being degraded or cleared from a subject or cell being treated which adds to the undue search burden regarding searching Groups I and II together versus separately.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
